TRAINING TITLE

PIPING FITNESS FOR SERVICE, PRESSURE VESSEL FFS, FFS FOR INSPECTORS

VENUE

Dubai, UAE

DURATION

5 Days

DATES

14 - 18 August 2022

PRICE

US\$4,000 per attendee including training material/handouts, morning/afternoon coffee breaks and Lunch buffet.

TRAINING INTRODUCTION

The design codes and standards for piping and pressure vessels provide rules for design, fabrication, inspection and testing of new systems. Piping and pressure vessels do degrade while in-service due to deficiencies from original fabrication or due to different causes of degradation. Fitness-for-Service (FFS) assessments are quantitative engineering evaluation performed to determine the structural integrity of an in-service systems containing a flaw or damage. The FFS help engineers to make run-repair-replace decisions to help ensure that the system in-service can continue to operate safely.

Fitness-for-Service intends to ensure safety of plant personnel and public while older equipment continues to operate, to provide technically sound fitness-for-service assessment procedure to ensure that different service provide furnish consist life prediction, and to help optimize maintenance and operation of existing facilities.

FFS is an integration of three disciplines; these are materials, inspection, and mechanical analysis.

The course will discuss the three technological triad required for fitness-for-service assessment, and apply that on the piping and pressure vessels systems. All of the above will be presented in connection with the related codes and standards.

Examples will be presented using the known methods and programs. Delegates are asked to bring with them their own laptops to practice some of such exercises.

TRAINING OBJECTIVES

- The participant will learn the importance of FFS for piping systems and pressure vessels
- The participant will learn the principles of FFS, and how to apply it on Piping system and Pressure vessels.
- The participant will learn where to find and how to calculate data necessary for FFS application
- The participant will learn how to use the results of FFS to take right decision concerning the operation, shutdown, interval of inspection, repair of the existing in-service piping
- The participant will learn how to evaluate the integrity and remaining life of piping systems and pressure vessels.
- The participant will have a chance to practice some the FFS assessment methods during the course.

TRAINING AUDIENCE

Mechanical engineers, process plant and piping / pressure vessels engineers and inspectors responsible for design, installation, operation, integrity and maintenance of piping systems and pressure vessels are encouraged to attend this course.

TRAINING OUTLINE

Ch 1 Piping and Pressure Vessels Deterioration and Failure Modes

Pre-Service Deficiencies

In-Service deterioration and damage

General Metal Loss due to Corrosion and/or Erosion

Localized Metal Loss due to Corrosion and/or Erosion

Surface Connected Cracking

Subsurface Cracking and Microfissuring/Microvoid Formation

Metallurgical Changes

Ch 2 Material Properties for FFS assessment

Strength Parameters

Yield and Tensile strength

Flow Stress

Stress-Strain relationship

Physical properties

Elastic Modulus

Poisson's Ratio

Coefficient of Thermal expansion

Fatigue Toughness

Fracture Toughness Parameters

Low bound fracture Toughness

Charpy V-Notch data

Fracture Toughness for in-service materials

Temper Embrittlement

Crack Growth

Categories of Crack Growth

Fatigue Crack Growth Calculation

Fatigue Curves

Smooth Bar test Specimens

Welded test specimens

Creep Rupture

Creep Strain-Rate Data

Crack Initiation

Creep Crack Growth

Ch 3 Stress Analysis for FFS Assessment

Stress Analysis Methods for a FFS

Linear Elastic Stress Analysis Methods and Acceptance Criteria

Nonlinear Elastic Plastic Stress analysis Methods and Acceptance Criteria

Methods of Structural Stability

Methods of Fatigue Evaluation

FFS Assessment Using Finite Element Analysis

Ch 4 Thickness, MAWP and Membrane Stress Equation for a FFS Assessment

Calculation of Minimum Thickness

Calculation of MAWP (MFH)

Calculation of Membrane Stress

Piping Components

Pressure vessels Components

Ch 5 Fitness-For-Service Assessment

FFS Engineering Assessment Procedure

Date Requirement

Assessment Techniques

Acceptance Criteria

Remaining Life Evaluation

Remediation

In-Service Monitoring

Types of assessment

Assessment for Brittle Fracture

Assessment of General Metal Loss

Assessment of Local Metal Loss

Assessment of Pitting Corrosion

Assessment of Blisters and Laminations

Assessment of Crack-Like Flaws

TRAINING CERTIFICATE

MAESTRO CONSULTANTS Certificate of Completion for delegates who attend and complete the training course

METHODOLOGY

Our courses are highly interactive, typically taking a case study approach that we have found to be an effective method of fostering discussions and transferring knowledge. Participants will learn by active participation during the program through the use of individual exercises, questionnaires, team exercises, training videos and discussions of "real life" issues in their organizations. The material has been designed to enable delegates to apply all of the material with immediate effect back in the workplace.
